Key findings

January 2025

Businesses in all regions feel effects of inflationary pressures in January

London and North East drive economic growth for country

Northern Ireland remains the most resilient labour market

The NatWest UK Regional Growth Tracker provides a timely snapshot of regional economic performance.

The report tracks monthly changes in business activity, demand, employment, backlogs, prices and the year-ahead outlook. The data are compiled from companies that participate in S&P Global's UK manufacturing and services PMI surveys.

For more reports on 12 UK nations and regions, visit www.natwest.com/business/insights/economics

Comment

Sebastian Burnside, NatWest Chief Economist, commented:

"London started 2025 as it ended 2024 – as the regional driver for growth for the UK. The North East, Wales and South West also enjoyed a positive start to the new year but in other areas, elevated price pressures are having an effect.

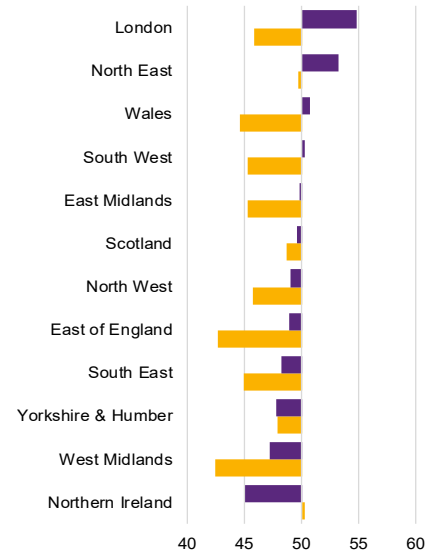

"Firms in every region of the UK reported rising cost pressures in January, as well as indicating steep increases in prices charged for goods and services too.

"The Bank of England appears to agree; last week it raised its inflation forecast to 3.7%. And whilst the Monetary Policy Committee hopes this rise is temporary, they are mindful of risks from increasing wages, national insurance contributions and energy costs.

"Against this backdrop demand has held up strongest in London and the

North East, whilst Northern Ireland has the most resilient labour market, with job creation continuing for 25 consecutive months."

The Business Activity and Employment indices are diffusion indices calculated from companies' responses to questions on monthly changes in the volume of business activity and employment, respectively. The indices vary between 0 and 100 and are the sum of the percentage of 'higher' responses and half the percentage of 'unchanged' responses. A reading above 50 indicates an increase compared to the previous month, and below 50 a decrease. The indices are seasonally adjusted.

Data compiled 9-29 January

Business activity

Four of the 12 UK nations and regions recorded business activity growth in January, up from three in December.

The NatWest Regional Growth Tracker Business Activity Index is the first fact-based indicator of regional economic health published each month, tracking the monthly change in the output of goods and services across the private sector. A reading above 50 signals growth, and the further above the 50 level the faster the expansion signalled.

As in December, London and the North East were the key drivers of activity growth throughout January, followed by Wales and South West with businesses there declaring increases in output during the first four weeks of 2025. Northern Ireland meanwhile moved to the bottom of the rankings, recording a steep and accelerated decrease in business activity*.

*As well as manufacturing and services, coverage in Northern Ireland also includes construction and retail.

NI Northern Ireland

In a typical business cycle, regions will move in a clockwise direction through the four quadrants in the chart to the left.

Expansion

Regions are **expanding**, and at a **faster rate** than the trend over the past six months. Regions furthest right are expanding at the strongest rate in the latest period, and the highest regions are seeing the greatest acceleration in growth over the past six months.

Slowdown

Regions are **expanding**, but at a **slower rate** than the trend over the past six months. Regions furthest right are expanding at the strongest rate in the latest period, and the lowest regions are seeing the greatest deceleration in growth over the past six months.

Contraction

Regions are **contracting**, and at a **faster rate** than the trend over the past six months. Regions furthest left are contracting at the strongest rate in the latest period, and the lowest regions are seeing the greatest acceleration in the rate of contraction over the past six months.

Recovery

Regions are **contracting**, but at a **slower rate** than the trend over the past six months. Regions furthest left are contracting at the strongest rate in the latest period, and the highest regions are seeing the greatest deceleration in the rate of contraction over the past six months.

Demand and outlook

New business growth confined to London and North East

As was the case in December, London and the North East were the only areas to record a rise in new business during the opening month of the year. Demand decreased elsewhere, and rates of decline accelerated in most cases. This included Northern Ireland, which registered the steepest overall drop in inflows of new work, and one that was the sharpest since December 2022.

Expectations remain positive but ease in most areas

Expectations towards growth in the coming year remained positive across the board in January, but optimism weakened in many cases. This included Northern Ireland, which recorded its lowest business confidence for just over two years. Firms in London were the most positive about the outlook ahead of those in the West Midlands, with both regions going against the general trend and seeing sentiment improve.

Employment and capacity

Employment falls everywhere except in Northern Ireland

All but one of the 12 monitored nations and regions recorded a decrease in employment for the second month running in January. The exception was once again Northern Ireland, although employment there rose only fractionally and at the slowest rate for over two years. The West Midlands saw the steepest drop in workforce numbers, followed closely by East of England.

Declining backlogged orders signal general lack of pressure on capacity

Backlogs of work (i.e. new orders or projects awaiting completion) fell almost universally at the start of the first quarter. Firms in Northern Ireland recorded the most marked drop in outstanding business, followed by those in the North West. Only the North East showed signs of increasing capacity pressures, registering a fourth successive monthly rise in work-in-hand.

Inflation

Cost pressures intensify across the UK

Businesses in all parts of the UK faced increased cost pressures in January. The fastest rate of input price inflation was recorded in the North East, where it reached the quickest since March 2023. Businesses in Wales recorded the slowest cost increases, though even there the pace of inflation was above the long-run series average.

South West sees highest rate of output price inflation

January saw faster increases in prices charged for goods and services across most nations and regions. The South West and East of England recorded the highest rates of output price inflation, respectively, while the greatest acceleration was registered in the West Midlands. The North East was the one exception, posting a fractionally slower increase in prices charged than the month before.

Methodology

The NatWest UK Regional Growth Tracker data are compiled by S&P Global from responses to questionnaires sent to companies that participate in S&P Global's UK PMI surveys. S&P Global compiles data for Scotland, Wales, Northern Ireland and nine English regions*.

Survey responses are collected in the second half of each month and indicate the direction of change compared to the previous month. A diffusion index is calculated for each survey variable. The index is the sum of the percentage of 'higher' responses and half the percentage of 'unchanged' responses. The indices vary between 0 and 100,

with a reading above 50 indicating an overall increase compared to the previous month, and below 50 an overall decrease. The indices are then seasonally adjusted.

The headline figure for each region is the Business Activity Index. This is a diffusion index calculated from a single question that asks for changes in the volume of business activity (at service providers) or output (at manufacturers) compared with one month previously. The Business Activity Index is comparable to the UK Composite Output Index.

For further information on the survey methodology, please contact economics@spglobal.com.

PMI by S&P Global

Purchasing Managers' Index™ (PMI®) surveys are now available for over 40 countries and also for key regions including the eurozone. They are the most closely watched business surveys in the world, favoured by central banks, financial markets and business decision makers for their ability to provide up-to-date, accurate and often unique monthly indicators of economic trends.

www.spglobal.com/marketintelligence/en/mi/products/pmi

S&P Global

S&P Global (NYSE: SPGI) provides essential intelligence. We enable governments, businesses and individuals with the right data, expertise and connected technology so that they can make decisions with conviction. From helping our customers assess new investments to guiding them through ESG and energy transition across supply chains, we unlock new opportunities, solve challenges and accelerate progress for the world.

We are widely sought after by many of the world's leading organizations to provide credit ratings, benchmarks, analytics and workflow solutions in the global capital, commodity and automotive markets. With every one of our offerings, we help the world's leading organizations plan for tomorrow, today.
